# Enervent Neo comprehensive technical details

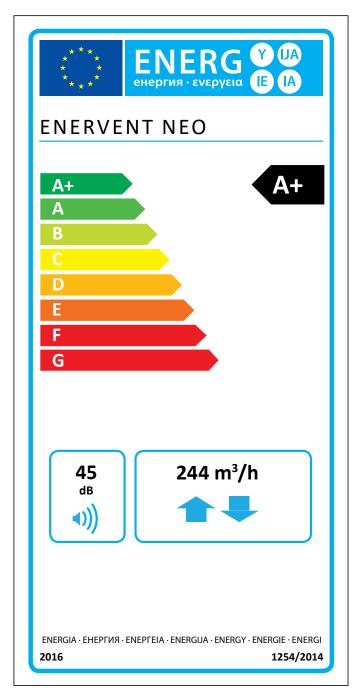

# **Enervent Neo**

The Enervent Neo unit is best suited for medium sized detached houses or apartments. It is also well suited for public spaces, where a smallish air amount is required.

Neo is a new kind of a ventilation unit inside out. Its insulation material makes the unit very lightweight and especially energy efficient.

Lightweight and slim Neo is the only unit in the market that fits in a standard 60 cm cabinet. It is easy to place the unit out of sight without need for a separate technical space.

The information on the energy label for this product has been defined with local demand control. Local demand control means that the ventilation unit continuously regulates the fan speed(s) and flow rates based on more than one sensor. Please remember to connect all local senseors (some sold as extra equipment) in order to accieve the declared energy class.

## **Technical details**

### General information

Reference flow rate according to EcoDesign directive (50 Pa) Air volume flow Pressure difference Leakage Duct size Cooker hood connection Weight Standard filters, 2 x cassette filter Filter dimensions (WxHxD) IP class Condense connection Nominal voltage Nominal current

Fans

Nominal voltage

Type of fan blade Nominal power Fan control eWind control

#### Heat recovery

Heat exchanger type Material Heat exchanger surface Heat exchanger dimensions Heat exchanger motor Ventilation unit annual temperature efficiency (EN 13141-7:2010) Supply air annual heat recovery efficiency\* (EN 16798-3:2017)

Extract air annual heat recovery efficiency\* (D5:2012)

\* supply air +18°C, extract air +21°C, exhaust air temperature limit -7°C

#### Other information
